SLA

Real-time monitoring

Ecommerce support teams are overwhelmed and unstructured.

High Email Volume

Hundreds of customer emails daily — order status, returns, complaints — all arriving unstructured.

No AI Triage

Support reps manually read and categorize every email before they can even begin to respond.

Wrong Routing

Emails assigned to the wrong team member cause delays, duplicated effort and frustrated customers.

No Ticket Logging

Support history stored only in individual inboxes — no centralized log for reporting or auditing.

SLA Breaches Unnoticed

Delayed tickets go undetected until a customer escalates — no automated monitoring in place.

Zero Visibility

No data on ticket volume, category breakdown, or response time performance.

Two Zaps. One complete support ecosystem.

ZAP 1

AI Support System

21 steps · Gmail + ChatGPT + Zapier Paths + Google Sheets

Gmail	ChatGPT	6 Paths	Gmail + Sheets
New Email Trigger	AI Classifies Intent	Route by Category	Respond & Log

6 intent categories: returns · order tracking · shipping · complaint · product availability · other

Each path: personalized auto-reply via Gmail + ticket logged in Google Sheets

Uses ChatGPT (OpenAI 2.56.0) via Zapier

ZAP 2

SLA Monitor

3 steps · Google Sheets + Gmail

Sheets
Monitors ticket log

Filter
Detects 'atraso'

Gmail
Sends SLA alert

Automatically alerts team when a ticket is overdue — no manual SLA checking needed.

Gmail → ChatGPT → 6 Paths → Auto-Response + Logging

01 Gmail

New Email — triggers the automation

02 ChatGPT (OpenAI 2.56.0)

AI Conversation — classifies email intent

03 PATHS — Split by AI Output

cambio_ devolucion	seguimiento_ pedido	informacion_ envio	reclamo	disponibilidad_ producto	otro
Steps 4–6	Steps 7–9	Steps 10–12	Steps 13–15	Steps 16–18	Steps 19–21
Gmail → Sheets	Gmail → Sheets	Gmail → Sheets	Gmail → Sheets	Gmail → Sheets	Gmail → Sheets

Each path: Send personalized Gmail auto-reply → Log ticket in Google Sheets

ChatGPT reads each email and outputs one of 6 categories.

Zapier's Paths then route the email to the correct response track — automatically, without any human reading or sorting.

Returns & Exchanges

"cambio_devolucion"

Sends return instructions + timeline + case opened in Sheets

Order Tracking

"seguimiento_pedido"

Sends order status info + tracking link + logged in Sheets

Shipping Information

"informacion_envio"

Sends shipping policy + estimated delivery + logged in Sheets

Complaint / Escalation

"reclamo"

Priority response sent + escalation flag added in Sheets

Product Availability

"disponibilidad_producto"

Sends stock info + alternative products + logged in Sheets

Other / Unclassified

"otro"

Generic acknowledgment sent + tagged 'otro' in Sheets for review

Automatic overdue ticket detection & alert system.

While Zap 1 handles incoming support, Zap 2 monitors the ticket log for SLA violations — ensuring no delayed ticket goes unnoticed.

01

Google Sheets

New or Updated Spreadsheet Row

Monitors the ticket log created by Zap 1. Triggers instantly when any row is added or updated — meaning every ticket is checked automatically.

02

Filter by Zapier

Condition: Alerta SLA contains 'atraso'

Only continues if the SLA field contains the word 'atraso'. Acts as a gate — tickets on time are ignored; overdue tickets trigger the alert.

03

Gmail

Send SLA Alert Email

Sends an automatic alert email to the responsible team member notifying them of the overdue ticket — with ticket details pulled from the Sheets row.

⚡ Key insight: Zap 2 reads the same Google Sheets log that Zap 1 writes — making them a fully connected, self-monitoring support system.

Before & After This System

BEFORE	AFTER
✕ Manual email reading and sorting by support staff	✓ ChatGPT reads and classifies every email automatically
✕ No AI — every email classified by a human	✓ 6-category AI triage — zero manual sorting needed
✕ Generic copy-paste replies to all customers	✓ Personalized auto-reply per intent category via Gmail
✕ No ticket log — support history lost in inboxes	✓ Every ticket logged in Google Sheets instantly
✕ SLA breaches only discovered when customers escalate	✓ SLA Monitor alerts team the moment a ticket is overdue
✕ No data on volume, type, or response performance	✓ Full ticket history with category, date, and status data
