AUTOMATION PORTFOLIO

Freelance Project Intake & Routing

Automated client intake, project filtering & full-team notification pipeline

7 Zap Steps	**2** Project Types
3 Teams Notified	**100%** Automated

Google Forms · Filter by Zapier · Airtable · Asana · Slack · Gmail

Diana Vasquez M.

Virtual Assistant & No-Code Automation

THE CHALLENGE

Freelancers lose clients to chaos at the intake stage.

No Project Filtering

All inquiries (web design, branding, other) land in one inbox — no automatic triage.

Delayed Team Alerts

Team members only find out about new projects when someone manually forwards an email.

No CRM Logging

Client data lives in Gmail threads and personal notes — never structured or searchable.

No Task Creation

Project tasks must be created manually in Asana after each intake — wasting billable hours.

No Client Confirmation

Clients receive no instant acknowledgment, creating doubt and reducing perceived professionalism.

THE SOLUTION

A 7-step intelligent client intake pipeline.

Every project inquiry is automatically captured, filtered by service type, logged in Airtable CRM, assigned as an Asana task, and confirmed — to client and team — without any manual work.

01 **Capture** — Google Form response triggers the Zap instantly

02 **Filter** — Only Web Design & Branding projects continue

03 **Log** — Airtable record created with all client details

04 **Task** — Asana task assigned with project brief

05 **Notify** — Slack channel alerted with client summary

06 **Alert** — Internal team email sent via Gmail

07 **Confirm** — Client confirmation email sent via Gmail

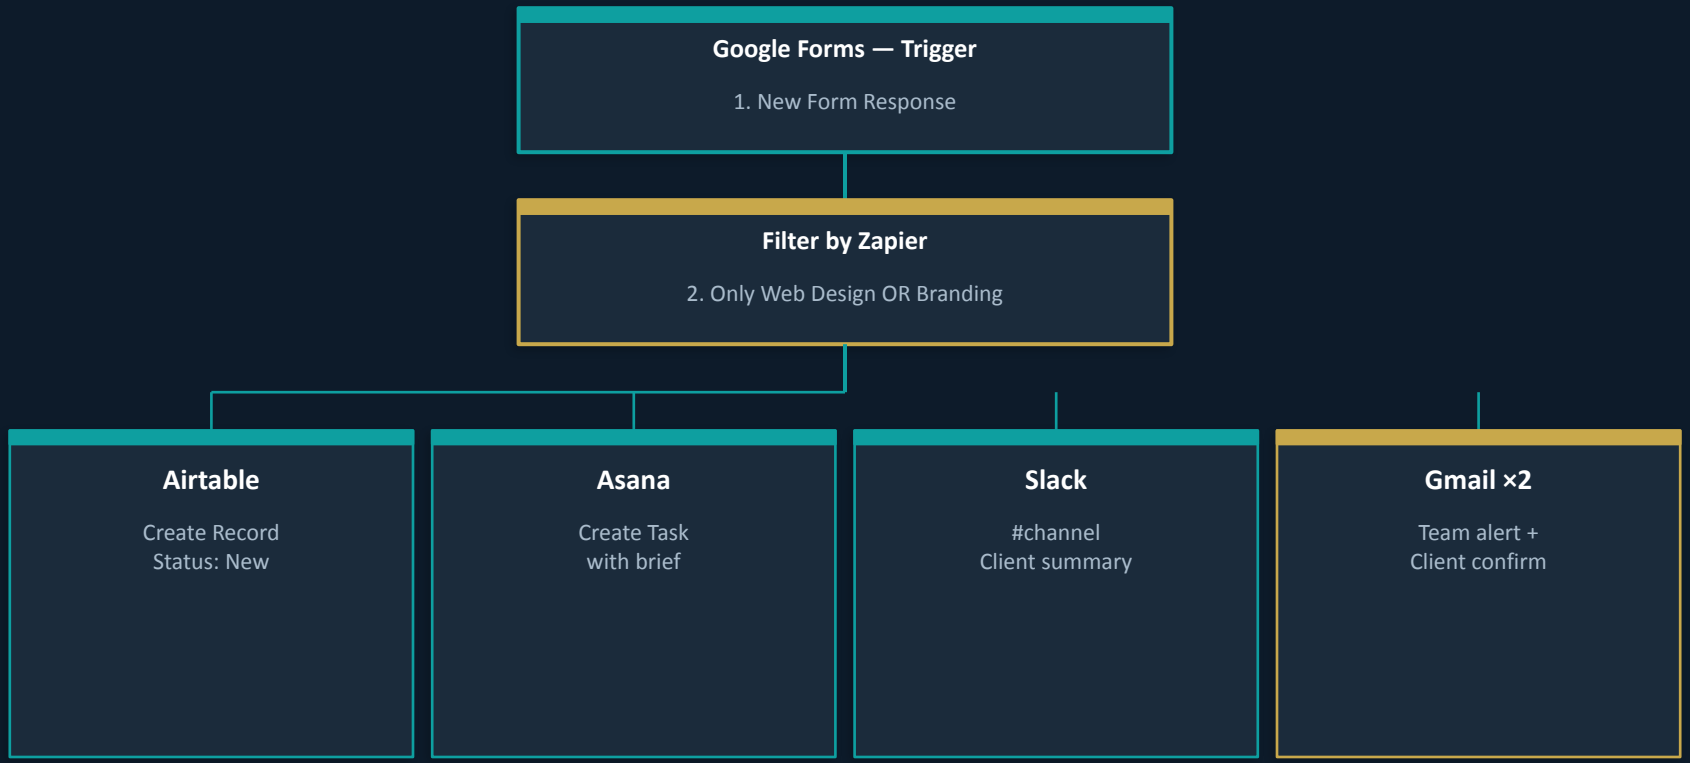
7-Step Zap — End-to-End Flow



★ *Gmail Step 6: Team notification · Gmail Step 7: Client confirmation — both fire automatically*

FILTER LOGIC

Web Design & Branding — How projects are qualified.

The Filter step acts as a quality gate — only relevant project types advance through the pipeline. All other inquiries are stopped, preventing noise in the team's tools.

✓ PASSES FILTER

Project Type = Web Design

→ Airtable record created

→ Asana task created with brief

→ Slack channel notified

→ Gmail → internal team alert

Project Type = Branding → same 5 actions fire

✕ BLOCKED BY FILTER

Project Type ≠ Web Design or Branding

✕ Zap stops — no further steps run

✕ No Airtable record created

✕ No Asana task created

✕ No Slack alert sent

✕ *Inquiry discarded — team stays focused on qualified work*

TRANSFORMATION

Before & After Automation

BEFORE

- ✕ All project types received — no triage or filtering
- ✕ Manual data entry into spreadsheets or sticky notes
- ✕ Asana tasks created by hand — hours wasted
- ✕ Team notified only when someone remembered to forward
- ✕ Clients waited hours for any acknowledgment
- ✕ No CRM — zero visibility into project pipeline

→

AFTER

- ✓ Filter gate qualifies projects instantly — only relevant work advances
- ✓ Client data auto-saved to Airtable CRM with all fields populated
- ✓ Asana task auto-created with client brief — zero manual work
- ✓ Slack alert fires in seconds — team always in the loop
- ✓ Client confirmation sent in under 60 seconds of submission
- ✓ Full CRM pipeline with tags, dates, status and project type

BUSINESS IMPACT

Simulated Results — 40 Monthly Inquiries

< 60s

Client response time

vs. hours manually

100%

Inquiries filtered

auto-qualified, zero manual review

Zap steps automated

zero manual tasks

3×

Faster onboarding

vs. manual CRM entry

Always-On Pipeline

Zap runs 24/7 — inquiries received outside office hours are processed instantly.

Clean CRM From Day 1

Airtable records are fully structured on creation — no cleanup needed later.

Zero Missed Notifications

Slack + 2 Gmail steps ensure both team and client are always informed.

Simulation based on 40 monthly inquiries. Actual results vary by business volume and project mix.

AUTOMATION PORTFOLIO

Automated intake. Zero friction.

From form submission to full team notification — in under 60 seconds, with complete CRM logging and zero manual intervention.
