CLIENT ACQUISITION & SEGMENTATION AUTOMATION SYSTEM

Diana Vasquez M.

Intermediate Automation · Multi-step + Conditional Logic

Automated Lead Capture, CRM Structuring & Strategic Client Tagging

using Zapier and Notion

Zapier | Notion | Google Forms | Google Sheets

Aesthetic Clinic

PROJECT OVERVIEW

Client Acquisition *Automation System*

Designed and implemented an automated lead capture and CRM segmentation system for a beauty clinic to streamline client intake, classification, and reporting.

TOOLS USED

Zapier · Google Forms · Google Sheets · Notion

BUSINESS TYPE

Aesthetic / Beauty Clinic

AUTOMATION LEVEL

Intermediate — Multi-step + Conditional Logic

01

Google Form

Client fills consultation request form

02

Google Sheets

Data logged automatically to reporting sheet

03

Notion CRM

Client record created with all details

04

Zapier Paths

Conditional tag assigned by service selected

THE PROBLEM

The Challenge

Beauty clinics receive multiple consultation requests daily but often lack structured systems to classify and manage leads efficiently.

Manual Data Entry

Staff manually copies each form response

No Client Segmentation

All leads treated equally regardless of service

No Service Visibility

Impossible to know which treatments are most wanted

Disorganized Follow-up

No structured process to contact leads after intake

No Centralized Reporting

Performance tracking requires manual data compilation

The Automated Solution

A multi-step automation that captures leads, stores structured data, and automatically segments clients based on service interest — zero manual work.

Google Form
Lead submits consultation form

Google Sheets
Row created in database

Notion CRM
Client record built automatically

Zapier Paths
Conditional branching fires

Tag Assigned
Strategic tag applied to record

Zero Manual Entry

No staff time needed to log leads

Real-time Reporting

Live data in Google Sheets always current

Smart Segmentation

4-tier client tagging fires automatically

CRM-Ready Pipeline

Notion database ready for follow-up actions

Client Segmentation Logic — Paths by Zapier

Conditional logic implemented via Zapier Paths to automatically assign strategic service tags based on client selection.

PATHS — Split into 4

Path condition:
Botox Treatment
Dermal Fillers

Notion Update

High Ticket

Premium services requiring specialist care

Path condition:
Laser Hair Removal

Notion Update

Recurrent

Repeat maintenance treatments

Path condition:
Deep Facial Cleansing

Notion Update

Entry Service

Introductory treatments for new clients

Path condition:
Not sure — I need guidance

Notion Update

Needs Consultation

Undecided leads requiring nurturing

CRM STRUCTURE

CRM Design & Pipeline Structure

Notion CRM structured to separate operational status from strategic client classification through automated tag assignment.

Paula Méndez	paula.mendez@gmail.com	3033344556	Not sure – guidance	New Lead	Needs Consult.	Apr 08, 2026

SYSTEM FLOW

Google Form — Zapier — Google Sheets — Notion CRM — 4 Paths

BUSINESS IMPACT

Before vs After + Business Impact

BEFORE AUTOMATION

- Manual data entry for every lead
- No client segmentation or tagging
- No visibility of service demand
- Disorganized, delayed follow-up
- No centralized reporting system

→

AFTER AUTOMATION

- Automated capture — zero manual work
- Strategic 4-tier tagging system active
- Real-time service demand visibility
- CRM-ready structured pipeline
- Live reporting database in Sheets
